

Reshav Abraham

Full Stack ML Engineer

About me

I am a passionate software engineer with experience in Full stack development and machine learning. I have experience building backend API's and Frontends. I also have experience in training and serving machine learning models.

Work Experience

Nlmatix

NLP Engineer

New York, NY — July 2019 - April 2021

Early Stage Startup Company specializing in Search and Extraction from unstructured text data. The product enabled users to perform semantic search queries on their digitally uploaded data. The product empowered users to automate data entry tasks that would require a skilled professional. The products backend API's were built with **Python**, Swagger api (OpenApi 3.0.0) and served with Gunicorn. The frontend was implemented with **React** and served with **Nginx**. It was containerized with **Docker** and deployed with **Kubernetes**, It is hosted on **GCP** and **Azure**.

- * **Developed** a service to parse and index PDF documents with high fidelity. Implemented and tested document layout analysis algorithms to improve the classification of header, paragraph, and table text. This significantly improved the search quality of the product.

- * **Lead** On-Prem installation for clients and customized deployments for restrictive environments. Prepared installations by simulating client environments. Designed deployment scripts for regular updates and roll-outs.

- * **Designed** and **Implemented** a Search Flagging and Approval System to track regressions and improvements in search quality. This guided the development when testing new changes to the Search Engine pipeline.

- * **Designed** and **Developed** back-end APIs with Python and Swagger.

- * **Developed** front-end features with React and ANTD.

- * Maintained and debugged CI/CD pipelines with Github Actions, Docker, Kubernetes, and GCP/Azure.

Dell EMC

Software Intern

Charlotte, NC — May 2017 — August 2017

- * Extrapolated memory usage for enterprise data pipelining software by modeling a regression on real-time memory consumption data using Apache Spark.

Projects

Human Voice Detection

- * Developed a neural network architecture using **CNN** and linear layers for processing audio signals to identify human voices.
- * Developed a script for scraping audio from YouTube playlists.
- * Utilized MFCC and other signal processing techniques to prepare data.

🏠 160 Vroom Street, Apt 46, Jersey City, NJ 07306

Technical Skills

Languages Python, JavaScript, Bash, C++, Java

Frameworks PyTorch, Tensorflow, Swagger, React

DevOps Docker, Kubernetes, Nginx

Cloud GCP, Azure

Databases MongoDB, Postgres, Redis

Markup \LaTeX , HTML, CSS, Markdown

Misc Git, Linux, Web Scraping, Clubhouse, Jira, Jupyter, Flask

Education

B.S Computer Engineering

Purdue University

West Lafayette, Indiana 2014 — 2018

Multi-core Processor System Verilog

- * Implemented a synthesizable multi-core processor for processing MIPS assembly language in SystemVerilog.

Automated Nerf-Gun Turret

- * Engineered a turret gun with 3D printed parts, STM32F407VGT7, and Raspberry pi. The turret gun was controllable with a Wii nunchuck and could detect and shoot human targets with a nerf gun.

- * Implemented human-target detection with MobileNetSSD and OpenCV.

Certificates

Natural Language Processing with Deep Learning

Stanford University, CS224N

October 2020 — December 2020

- * Developed a Neural Machine Language Translation model in **PyTorch**.

- * Implemented encoder and decoder networks using **LSTM** and **CNN** layers for processing out-of-vocabulary words.

Interests

- * Soccer

- * Guitar

- * Chess
